****CTA Button:**** [BUY NOW]

Create a hyper-realistic luxury commercial video inspired by the uploaded reference. A stunning coastal cliff and ocean environment during a bright sunny day with crystal-clear water, realistic atmosphere, and premium travel-commercial aesthetics. A giant version of the uploaded product is descending from the sky beneath a beautiful premium parachute. The entire video must feel like real footage captured at an iconic coastal viewpoint rather than CGI.

Start with a cinematic wide shot of the coastline and ocean. The product appears naturally in the distance, suspended beneath a large elegant parachute. The descent must feel physically accurate, realistic, and believable. The product is not floating or hovering. It behaves like a real object with weight attached to a parachute system.

The parachute canopy reacts continuously to natural coastal wind. The fabric subtly inflates and breathes with airflow. Suspension lines remain realistic and under tension. The product gently drifts through the air with natural inertia and believable weight transfer.

****CRITICAL PRODUCT MOTION REALISM****

The product must never appear frozen, robotic, perfectly centered, or mechanically suspended.

During descent:

- * Gentle pendulum movement.
- * Small natural side-to-side drift.
- * Subtle forward and backward inertia.
- * Very slight rotational corrections only.
- * Product movement follows parachute movement with realistic delay.

- * Wind influences the parachute first, then the product reacts naturally.
- * Smooth, controlled, premium motion.
- * Realistic gravity and believable mass.
- * Calm and elegant descent.

The movement should resemble a real object suspended beneath a professional parachute in light coastal wind conditions.

The camera follows from a realistic human-filmed perspective with smooth professional stabilization. No drone-style aggressive movements. No rapid zooms. No AI-style camera corrections. The environment remains stable and realistic.

As the product approaches the landing zone, anticipation builds naturally. The descent gradually slows. The product performs one or two subtle final stabilization swings before touchdown.

The landing must feel premium and expensive.

The product touches down softly with realistic weight and momentum. A beautiful circular splash of ocean foam, flower petals, mist, luxury particles, or elegant environmental effects expands naturally around the landing area. No explosions. No destructive impacts. No unrealistic force.

After touchdown:

- * Product settles naturally.
- * Small realistic weight transfer.
- * Gentle stabilization movement.
- * No instant stop.
- * No immediate freezing.
- * Natural resting position.

The parachute gradually loses lift and softly collapses after landing. The canopy slowly folds and settles on the ground with realistic fabric simulation. It remains visible in the scene and does not disappear or fly away.

Immediately after the landing, premium advertising typography reveals around the product.

Large luxury commercial typography emerges elegantly in the environment while keeping the product completely visible.

First reveal:

****[PRODUCT NAME]****

Second reveal:

****[DISCOUNT OPTION]****

Third reveal:

Large premium CTA button:

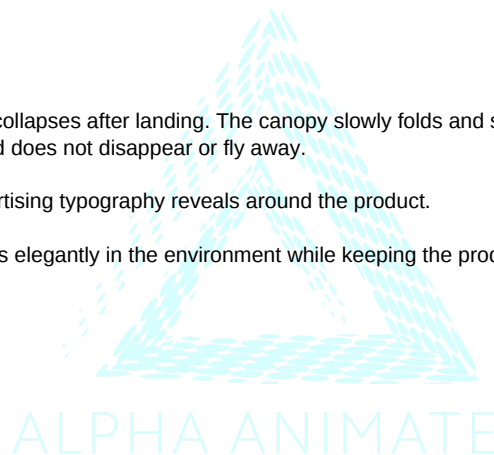

****[BUY NOW]****

Typography style:

- * High-end luxury advertising design.
- * Large elegant font.
- * Premium spacing and composition.
- * Sophisticated motion graphics.
- * Soft depth and realistic shadows.
- * Integrated naturally into the environment.
- * Highly readable.
- * Modern cosmetic-commercial aesthetic.

The text reveal should feel expensive, cinematic, emotional, and professionally art-directed.

The color palette should be inspired by the uploaded product colors. Beautiful sunlight, realistic reflections, atmospheric perspective, premium commercial photography, cinematic depth of field, high dynamic range, global illumination, ultra-detailed materials, luxury advertising quality, seamless integration between product and real environment.

Final shot: the landed product stands heroically in the center while the typography remains visible around it. Hold the final composition for 2–3 seconds so the viewer can comfortably read all information.

IMPORTANT NOTICES

- * Use only the uploaded product design, proportions, colors, branding, label, and packaging.
- * Do not redesign the product.
- * Do not modify label graphics.
- * Keep branding sharp and readable.
- * Product must remain upright during the entire sequence.
- * No duplicated products.
- * No duplicated text.
- * Text must never cover the product.
- * Product must remain the hero element of every shot.
- * No floating product syndrome.
- * No robotic movement.
- * No zero-gravity behavior.
- * No drone-like hovering.
- * No excessive spinning.
- * No sudden direction changes.
- * No violent swinging.
- * No aggressive parachute collapse.
- * No unrealistic impacts.
- * No cartoon visuals.
- * No low-quality CGI.
- * Maintain hyper-realistic premium commercial quality throughout the entire video.
- * Final hero shot must remain readable, stable, and elegant.
